

Velvet Brand Teff Grass

Proven Genetic Innovation

- ✓ New, warm season summer annual grass
- ✓ Multiple crops of soft, palatable, nutritious forage

Adaptation and Use

- ✓ A fast growing, summer annual grass with a fine leaf blade, aggressive tillering, large crowns and a shallow, fibrous root system
- ✓ Normally 3-4 feet tall at harvest maturity
- ✓ A crop that has demonstrated adaptability all across the U.S.
- ✓ Forage quality is comparable to Timothy
- ✓ Best utilized for dry hay or direct pasture
- ✓ Seasonal yield can exceed 6 tons per acre with aggressive management and conducive growing conditions

Management Profile

- ✓ Plant after spring frost danger has passed and soil temperatures exceed 70°
- ✓ Drill or broadcast 8-10 pounds of coated seed per acre into a firm seedbed at a quarter inch or shallower seeding depth.
- ✓ A fast growing, multi-crop, warm season grass that responds to fertility, especially N
- ✓ For maximum seasonal yield and forage quality harvest by early heading. Normally 2 or 3 harvest per season depending upon location
- ✓ Set a cutting height of 3-4 inches to promote rapid regrowth after harvest
- ✓ Growth ceases with the first fall frost but is safe to harvest

Actual performance may be adversely affected by extreme conditions.
