

Give Your Lawn a Purpose

All Purpose Lawn Mix

All Purpose Grass Mix was developed for situations where toughness, durability, little or no maintenance and low budgets are the key criteria. Tall fescue is a durable species that tolerates heavy traffic, heat and drought conditions, is winter hardy and adaptable to a wide range of soil types. Creeping red fescue is a sod-forming grass that tolerates low fertility and poor soil conditions, and also exhibits winter hardiness. Quick ground cover is provided from the annual and perennial ryegrasses. The Kentucky bluegrass is adaptable to varying climatic conditions and forms a dense, persistent sod.

Recommended Usage

All Purpose Grass Mix is intended for situations affected by low budgets and little or no maintenance. This mixture has been used successfully on campgrounds, parks, school yards, cemeteries and roadside areas.

Suggested Maintenance

This mixture was formulated to perform with no fertilization, and survive on whatever Mother Nature supplies. Mowing height is suggested at 2 - 3 inches.

Composition:

35% Fawn Tall Fescue
20% Annual Ryegrass
15% Park Kentucky Bluegrass
15% Creeping Red Fescue
15% All Star 3 Perennial Ryegrass

Suggested Seeding Rate:

4½ - 5 lbs. per 1,000 sq. ft.
200 - 225 lbs. per acre
