

Let the Sun Shine In

Sunny Lawn Seed Mixture was designed to provide rapid germination and establishment, providing a quality turf requiring normal to low maintenance. The Kentucky bluegrass provides quick germination with excellent density and pest resistance under normal and low fertility situations. The fine-leaf perennial ryegrass provides exceptionally fast emergence, rich color and medium texture, allowing it to blend beautifully and uniformly with other grasses. Creeping red fescue exhibits shade tolerance and the ability to perform well in low fertility soils. It also blends well with the bluegrass and ryegrass.

Recommended Usage

Sunny Lawn Mix is recommended for residential and commercial lawns, parks, playgrounds, athletic fields and other normal to low maintenance turf areas with varying soil conditions and traffic.

Suggested Maintenance

Vigorous growth and density can be achieved with a single application of fertilizer each year. No more than two applications per year should be applied. Suggested mowing height is 2 - 3 inches, but no lower than ½ inch.

Composition:

25% Merit Kentucky Bluegrass
25% Park Kentucky Bluegrass
15% All Star 3 Perennial Ryegrass
15% Kokomo 2 Perennial Ryegrass
20% Creeping Red Fescue

Suggested Seeding Rate:

3½ - 4 lbs. per 1,000 sq. ft.
150 - 175 lbs. per acre
